According to Statistics MRC, the Global Aquaculture and Fisheries Market is accounted for \$ 160.98 billion in 2017 and is expected to reach \$328.53 billion by 2026 growing at a CAGR of 6.7% during the forecast period. Factors such as rise in consumer awareness of health benefits of fish are favoring the market growth. In addition, the market demand is expected to be further fuelled by the lack of naturally available varieties owing to extensive fishing. In addition to this, Rice-fish culture probably acts as key growth opportunity for the market. However, Economic Impact and Risk to Wild Stocks is hampering the market growth.

On the basis of Species, Carps capturing and culturing is termed as shell fishery and its demand for carps is expected to rise as it is one of the prime cultivated fish due to its high compatibility with non-ideal environmental conditions and its extensive use in fish farming. Moreover, Mollusks development has been rapidly increasing to intensive mariculture during the past decade due to the carrying capacity of some areas and contribution to deteriorate of the culture environment and Owing to health benefits resulting in high consumption. By geography, Asia Pacific region is expected to surpass other regions market during the forecast period due to China's economic development and performance, including the introduction of policies in favour of aquaculture products.
