However, iris identification and authentication and performance deterioration for inaccurate detection of fingerprint are some of the factors hindering the market growth.

The Automated Fingerprint Identification System is a biometric categorization method that uses digital imaging information. It is majorly used by law organization agencies to compare fingerprints and capture criminals. As digital technology progresses, fingerprinting is increasingly being used as a fraud prevention measure. It has been used in large-scale community identifications, the chief reason of which is to prevent multiple enrollments in an electoral. AFIS is gaining popularity as a method used to identify individual user logons.

By End User, government segment witnessed steady growth during the forecast period owing to increase adoption of unique identity for an individual that helps eliminate issues such as identity theft or false identity. Based on geography, Asia Pacific region is expected to register the highest market growth rate during the forecast period due to increasing focus of governments towards the deployment of biometric solutions at airports and for border control to boost the security level.
