According to Statistics MRC, the Global Automatic Tube Cleaning System Market is accounted for \$97.89 million in 2017 and is expected to reach \$174.87 million by 2026 growing at a CAGR of 6.7% during the forecast period. Some of the key factors propelling the market growth is improving operational efficiency of HVAC systems due to automatic tube cleaning system. However, limitations in some automatic tube cleaning systems and fouling and scaling in the tubes of heat exchangers reduce efficiency acts as restraints for the market growth.

Automatic tube cleaning system is a unique hydro-mechanical cleaning system that operates continuously to keep heat exchanger surfaces completely free from fouling, which results in operating capacity and efficiency are constantly maintained at peak levels, reducing overall energy consumption. And there's absolutely no need for periodic shut-down of the HVAC system for costly and time-wasting chemical cleaning.

Based on end user, power generation segment are also expected to gain popularity as the power plants have to deal with an increasingly harsh environment; which will have enormous effect on the market.

By geography, Asia Pacific region provides potential growth opportunities with the availability of coal makes thermal power a preferred source of electricity generation, increasing population and rapidly growing industrialization.
