Abstracts

According to Statistics MRC, the Global Automotive Air Filter Market is expected to grow at a CAGR of 18.5% during the forecast period. Factors such as rapid growth of the automotive industry, steady expansion of vehicle fleet size, increasing sales of passenger cars as well as rise in purchasing power of consumers are boosting the market growth. However, regular replacement, maintenance cost and introduction of electric vehicles in certain regions are likely to hamper the market during the forecast period.

An automotive air filter helps extend engine life, as it competently trap dirt and fragments that damages the internal parts of an engine such as pistons and cylinders. Engine damage can occur even by a small particle of soil, which may lead to expensive repairs. Automotive air filters allows proper air flow to the engine, thus maintaining the air-fuel mixture. They help to improve the emission control system and minimalize ignition problems in the spark plug, which can give rise to serious drivability issue. Proper air flow enables the engine to function perfectly, thereby reducing fuel utilization as well as emissions.

Amongst application, the passenger Car segment was the most important segment accounting for significant share during forecast period. Passenger cars have already formed a large market space for itself in the global automotive industry on version of growing mid-size cars growth particularly in promising economies of China and India. Both market infiltration and growth rate is high in case of air filters application in passenger car segment. The Asia-Pacific region is expected to lead the market. The demand for two-wheelers is expected to grow in the rural parts of countries such as China and India, owing to the increase in demand for two-wheelers from a large number of middle-class families, especially in India.
