Abstracts

According to Statistics MRC, the Global Automotive Airbag and Seat Belt Market is accounted for \$53.98 billion in 2017 and is expected to reach \$168.23 billion by 2026 growing at a CAGR of 13.5% during the forecast period. Rising demand for safer and more efficient driving experiences, high demand from passenger vehicles, the increasing number of mandates pertaining to the implementation and growing government road safety regulations are some of the key factors driving the market growth. However, factors such as the rising development of active safety systems and maintaining the stability between cost & quality are some of the factors hindering the market growth.

Automotive Airbag and seat belts are designed to care for the drivers from unanticipated jerk or vehicle general strike. By design, the safety bags will defend them by preventing impact on the body from the chest and above and are additional units to prevent injury to head or chest from the routing or console or glass or anything else. Both seat belts and airbags are the main defense strategy in the vehicles. Air Bags are not meant to be the main safety mechanism.

By Electric Vehicle, hybrid electric vehicle (HEV) is expected to be the fastest growing segment in the electric vehicle over the forecast period. Stringent emission norms, surroundings safety, motor vehicle electrification, and government system are expected to boost the market for HEV airbags & seatbelts. Based on geography, Asia Pacific is the global leader of this market during the estimated period. The demand for this market is triggered by growing vehicle production in developing countries such as China and India and the rising number of luxury vehicles in these countries.
