According to Statistics MRC, the Global Automotive Aluminum Alloy (OE) Market is accounted for \$4,038.53 million in 2020 and is expected to reach \$10,435.91 million by 2028 growing at a CAGR of 12.6% during the forecast period. Developments and advancements in the transportation sector, growing demand for electric vehicles across the globe and high utilization of aluminum in vehicle manufacturing application are driving the market growth. However, high cost associated with the technology and engineering barriers are hampering the growth of the market.

Aluminum is being utilized in the body and different parts of vehicles by manufacturers for light weighting their vehicles leading to better fuel efficiency. Automotive aluminum alloys are used in manufacturing of powertrain, chassis, and exterior and interior parts of commercial and passenger vehicles to reduce their weight and increase fuel efficiency.

Based on the application, the heat exchanger segment is going to have lucrative growth during the forecast period as heat exchangers are widely employed in vehicles for various applications such as engine cooling, fuel cooling, condenser and evaporators for air conditioning system. Aluminum alloy has high thermal conductivity, corrosion resistance property and good formability owing to which aluminum is used in heat exchangers. By geography, Asia Pacific is going to have high growth during the forecast period due to the presence of a prominent automotive industry in the developing nations, high vehicle production and increasing production and sales of electric vehicles, especially in China.

Some of the key players profiled in the Automotive Aluminum Alloy (OE) Market include ArcelorMittal SA, UACJ Corporation, ThyssenKrupp AG, Novelis Inc., AMG Advanced

Metallurgical Group NV, Massey Ferguson Ltd, Kobe Steel, Ltd., Constellium NV, Alcoa Inc. and Norsk Hydro ASA.
