## Abstracts

According to Statistics MRC, the Global Automotive Clutch Market is accounted for \$9119.14 million in 2017 and is expected to reach \$18535.29 million by 2026 growing at a CAGR of 8.2% during the forecast period. Stringent emission norms, need for fuel efficiency as well as technological advancement such as the dual clutch transmission system are driving the market of Automotive Clutch Market. However, high cost act as a barrier for the growth of automotive clutch market.

Automotive Clutch is a mechanical device that is used for engagement and disengagement of transmission from the driving shaft to the driven shaft. The automotive clutch operates quietly and mitigates the drive-related vibration during its operation. Several friction materials are utilized to manufacture a clutch in order to ensure smooth engagement of gears, offer resistance, and providing strength. Organic friction materials are commonly used as friction material for clutch facing, as they offer a perfect combination of smooth engagement, wear resistance, and cost-effectiveness, as compared to others friction materials. Dual clutch transmission and automated manual transmission are gaining popularity among car manufacturers as these systems offer all the convenience of the conventional automatic transmission, but at a lower price and without hampering fuel efficiency.

Based on transmission type, the automatic transmission is highly in consumer inclination in countries such as China and India is towards affordable cars with AMT systems, this is resulting in growth of automotive clutch system in these countries. By Geography, Asia-Pacific region is expected to witness a rise in the sales of cars led by Indonesia, India, and Vietnam. Lead by China, the largest automotive market in the world, the Asian countries are planning on becoming the automotive hubs of the world.
