Abstracts

According to Statistics MRC, the Global Automotive Forging Market is accounted for \$34,576.30 million in 2020 and is expected to reach \$59,408.52 million by 2028 growing at a CAGR of 7.0% during the forecast period. The increasing demand for enriched vehicle engine performance and automation in manufacturing processes and the adoption of innovative approaches by original equipment manufacturers (OEM) are driving the market growth. However, fluctuation in the cost of raw materials is hampering the growth of the market.

Automotive forging involves the manufacturing of automotive components, including engine parts, bearings, gears, chassis, axles, and others. The automotive forging process can be carried out on materials either in the hot or cold state, depending upon the mechanical properties essential. Automotive forged products offer high strength-to-weight ratios, strength, and superior toughness. The most common materials exploited in the automotive forging market are steel and aluminum. Steel is generally used in the automotive forging industry due to its availability, strength, and high resilience.

Based on the supplier type, local is going to have lucrative growth during the forecast period. This dominance is accredited to the high demographic growth rate, particularly in the developing countries that include more raw material production and cheap labor convenience. Furthermore, the growing provision of the government and their favorable initiatives to encourage local production of forged parts in numerous urban and suburban parts of the country is expected to increase the growth of the market.

By geography, Asia Pacific is going to have high growth during the forecast period. Expansion in infrastructure, industrialization, and rapid economic growth in countries, such as China, India, and Indonesia boost the progress of the automotive forging

market in the Asia Pacific. Furthermore, India and China are the centers for automotive forging manufacturers. Additionally, favorable government initiatives are motivating the manufacturing sector in the region, which will boost the growth of the automotive forging market in near future.
