According to Statistics MRC, the Global Automotive Gasket & Seal market is accounted for \$65.07 billion in 2017 and is expected to reach \$123.72 billion by 2026 growing at a CAGR of 7.4% during the forecast period. Increasing global production volume of light and heavy vehicles, and engine downsizing & lightweight components assemblies are some of the key factors propelling the market. However, the growing electrification of vehicles around the city is hampering growth.

Gaskets and seals are fundamental components in a vehicle, which are used for filling the gap between two components to make sure that there is no leakage between them during the compression stage. Automotive gaskets have been categorized as metallic gaskets and non-metallic gaskets; whereas automotive seals have been divided into mechanical seals, O-rings seals, lip seals, and rotary seals.

Based on the type, the gasket market is predicted to produce the maximum because of the increase in acceptance of gaskets in the automotive industry. Use of gaskets and seals has decreased the maintenance cost of vehicles and has radically improved the lifespan of the automotive components. By Geography, North America is projected to grasp an important contribution in the global automotive gasket and seal market. The automotive commercial vehicle requirement is rising in the United States as the demand for commercial vehicle in the country has increased, which is a major reason for propelling the need of gaskets and seals market in the country.
