According to Statistics MRC, the Global Automotive Heat Shield Market is accounted for \$12,378.45 million in 2017 and is expected to reach \$33,505.45 million by 2026 growing at a CAGR of 11.7% from 2017 to 2026. Some of the factors such as increasing adoption of electronics in automobiles and rising automotive sector are fueling the market growth. However, factors such as high cost in aftermarket and rise in demand for battery electric vehicles are hampering the market growth. Further developments in automotive heat shield technology provide ample opportunities for the market.

Automotive heat shield is an accessory used in vehicles in order to stop any radiant heat damage to the sensitive components of the vehicle. The engine produces a terrific amount of heat and numerous components placed in the engine part need a sufficient temperature in order to attain the best performance. As a result, the heat emitted from the engine must be averting from sensitive components. The heat shield plays a very important role in protecting the components from the heat, also deflecting it away or by absorbing it.

Amongst Product, Exhaust Heat Shield Insulation raises the exhaust temperature and exhaust flow, which aids build power in vehicles. The main intention of exhaust heat shield insulation is to decrease under-hood temperatures and uphold hotter exhaust gas inside the exhaust system for additional horsepower. It is extensively used in catalytic converters, mufflers, headers and for exhaust tubing. By geography, Asia Pacific is dominating the global automotive heat shield market during the forecast period due to the increase in the disposable income of individuals and expansion in the automotive sector has driven the production of vehicles.
