Abstracts

According to Statistics MRC, the Global Automotive Hydrostatic Fan Drive System Market is accounted for \$153.61 million in 2020 and is expected to reach \$301.62 million by 2028 growing at a CAGR of 8.8% during the forecast period. Government initiatives across the world to reduce carbon emissions, growing demand for hydrostatic fans and advancements in engine manufacturing are driving the market growth. However, high initial capital and maintenance costs required are hampering the growth of the market.

Automotive hydrostatic fan drive system is an essential component employed in the automobile that assists with control units, sensors and lubrication. The primary aim of a fan drive system is to get rid of excess heat and regulate temperature in the vehicle when the engine heats up.

Based on the vehicle type, the off-road vehicles segment is going to have lucrative growth during the forecast period owing to the stringent emission regulations and norms for off-highway vehicles which led to a requirement for effective cooling systems which in turn drive the growth of this segment. By geography, Asia Pacific is going to have high growth during the forecast period due to the rise in demand for agricultural tractors and construction equipment due to agricultural advancements in developing nations like India and China.
