## Abstracts

According to Statistics MRC, the Global Automotive Turbochargers Market is expected to grow at a CAGR of 11.5% during the forecast period. Growing demand for powerful and fuel-efficient gasoline-powered vehicles, increasing reputation of electric vehicles and strict government emission norms used for fuel efficiency vehicles are some of the key factors driving the market growth. However, rising implementation of electric vehicles and accessibility of low-cost conventional technologies are hindering the growth of the market. Growth of electric turbocharger and expansion of ball bearing turbocharger are some of the trends for the market.

Automotive turbocharger acts as a turbine that is determined with the energy of exhaust gas developed by the internal combustion engine. In general, a turbocharger consists of two parts namely turbine and a compressor that run similar with the help of a shared shaft. A turbocharger increase the fuel efficiency of the engine by pushing additional clean air into the engines to burn fuel and distribute greater power.

By technology, variable geometry turbocharger (VGT) is important for specific controlling of NO<sub>x</sub> and particulate emissions. Furthermore, shifting preference can be attributed to the stipulation of several benefits such as raising the engine effectiveness, decrease in lag time, and price efficiency than the counterparts. It is a family of turbochargers, typically intended to permit the efficient aspect ratio (A: R) of the turbo to be altered as conditions change. This is done because optimal aspect ratio at low engine speeds is extremely different from that at huge engine speeds.

In terms of geography, North America is anticipated to dominate the largest market share during the forecast period owing towards the strict carbon emission regulations by NHTSA. These regulations force OEMs to appear for innovations to attain engine

downsizing. In addition, consumer awareness of fuel efficiency is important to the use of turbochargers within gasoline vehicles and growing investment with the industry players in the North America region.

Some of the key players in Automotive Turbo Charger Market include Continental AG, Delphi Technologies, Inc, Magnum Performance Turbos, Precision Turbo and Engine, Cummins India Ltd, BorgWarner Inc., Mitsubishi Heavy Industries, Ltd., Honeywell International Inc., IHI Turbo America, Eaton Corporation Plc, Turbo Energy Private Limited, Bosch Mahle Turbo Systems GmbH & Co., Synopsys, Inc., Bullseye Power, LLC, Fengcheng Xindongli Turbocharger Co., Ltd., Rotomaster International, Turbonetics Inc. and THE TURBO ENGINEERS GmbH.
