## Abstracts

According to Statistics MRC, the Global Barite Market is accounted for \$1.50 billion in 2020 and is expected to reach \$3.05 billion by 2028 growing at a CAGR of 9.3% during the forecast period. The growing usages in the plastics industry, oil and gas and in drilling fluid are the major factors driving the market growth. However, the presence of close substitutes, such as celestite and iron ore, is restraining the market growth.

Barite is a kind of mineral that carries barium sulfate.  $BaSO_4$  is the chemical formula used for barite. The barite is found in many colours such as white, brown, grey, yellow and brown. It can be colourless. Countries like china, US, India and Morocco are the primary countries where commercial deposits of barite are found. For usage in various applications high density and chemical inertness make barite an ideal mineral. Due to its usage in exploration and development of petroleum and natural gas resources barite is an important mineral. It is mostly mined for layers of sedimentary rock. In few cases barite is a by-product of mining silver, zinc, lead or other metal ores.

Based on colour, the grey segment is estimated to have a lucrative growth due to the fact that grey colour barite is widely used in used in oil drilling application. Besides, surge in offshore oil & gas exploration activities across the globe to meet the growing global demand for energy is expected to fuel the demand for grey colour barite in the near future.

By geography, North America is going to have high growth during forecast period. A significant boost in the production of tight oil, particularly in the U.S., has resulted in a significant demand for the product. Canada is yet another prominent market in the region as there is a number of oil rigs in the country for which barite is largely used for well drilling services.

Some of the key players profiled in the Barite Market include Anglo Pacific Minerals,
