Abstracts

According to Statistics MRC, the Global Betavoltaic Device Market is accounted for \$1.41 billion in 2020 and is expected to reach \$3.36 billion by 2028 growing at a CAGR of 11.5% during the forecast period. High demand for alternative power supply and rising demand from medical sector are driving the market growth. However, the lack of knowledge and the lack of R&D funding for betavoltaic devices are hampering the growth of the market.

The betavoltaic device generates electric current from beta particles such as electrons emitted from a radioactive source and it is a type of nuclear battery that has long life efficiency, and reliable for the operation of the electrical system in an inaccessible and hostile environment.

Based on the end user, the defense segment is going to have lucrative growth during the forecast period as defense forces could use these betavoltaic batteries to power electrical circuits that will protect military systems from tampering by destroying information stored in the systems.

By geography, North America is going to have high growth during the forecast period due to the rapid increasing prevalence of cardiovascular diseases in the U.S., and surging growing adoption of these devices as a substitute power supply for use in hostile conditions in the region.

Some of the key players profiled in the Betavoltaic Device Market include City Labs, Inc,

BetaBatt, Inc., Direct Kinetic Solutions, Widetronix and Qynergy Corp.
