## Abstracts

According to Statistics MRC, the Global Calcite Market is accounted for \$10.63 billion in 2020 and is expected to reach \$18.53 billion by 2028 growing at a CAGR of 7.2% during the forecast period. The growing demand for calcite as an alternate for kaolin and talc, rising demand from the plastics and paper industries are driving the market growth. However, cost of transportation and sluggish neutralization action are hampering the growth of the market.

Calcite is a common constituent of sedimentary rocks such as limestone and is settled mostly in caves to form stalagmites and stalactites. Naturally calcite can be found in the earth's crust due to both chemical precipitation of calcium carbonate and from the transformation of shells, coral, and algal debris into calcite. Due to calcite's acid-neutralizing ability in preparing medicines it is mostly used in pharmaceutical industry.

Based on the type, the precipitated calcium carbonate (PCC) segment is going to have lucrative growth during the forecast period due to its high purity and non-toxic properties. Due to these properties, it has high demand in food additives, pharmaceutical, and paper products. PCC is considered as favored material due to the operational flexibility. Improved gloss and opacity are key features creating way for a wider application of PCC in various sectors.

By geography, Asia Pacific is going to have high growth during the forecast period. This is mainly due to the increasing demand for calcite from polymer, construction, medical, agriculture, and rubber industry. China and India are the major countries to consume calcite due to its growing usage in construction industry for cement, paints & coating, adhesive and sealants applications.

Some of the key players profiled in the Calcite Market include Nordkalk Corporation , Wolkem India Pvt Ltd, Mississippi Lime Company, Maruo Calcium Co., Ltd., Longcliffe
