Abstracts

According to Statistics MRC, the Global Cellulose Acetate Market is accounted for \$4.39 billion in 2020 and is expected to reach \$7.59 billion by 2028 growing at a CAGR of 7.1 during the forecast period. The rising number of cigarette consumers and increasing demand for cellulose from the textile & apparel industry are driving the market growth. However, stringent government rules and regulations relating to health risks linked with smoking is hampering the growth of the market.

Cellulose acetate is a natural type of plastic composed of natural cellulose, resulting from acetylation of cellulose from two sources such as cotton linters or wood pulp. Cellulose acetate is a high-performance thermoplastic used for numerous applications due to its distinctive blend of properties such as high dielectric constant, good chemical resistance, high impact and mechanical strength, and similarity with human skin.

Based on the type, the fiber segment is going to have lucrative growth during the forecast period. The developing research ensuing in the inventive use of fiber is the main reason for the growth of this segment. Moreover, the ease of obtainability of fiber and extensive suitability in tobacco industries are further reasons for the anticipated growth.

By geography, Asia Pacific is going to have high growth during the forecast period, owing to the increasing industrialization with cheap labor accessibility and growing textile industry in the province is predictable to contribute towards the market growth.

Some of the key players profiled in Cellulose Acetate Market include Acordis Cellulostic Fibers, Arkema SA, BASF SE, Borregaard ASA, Celanese Corporation, China National Tobacco Corporation, Daicel Corporation, Eastman Chemical Company, Ecolab, Kemira, Mitsubishi Chemical Holdings, Rayonier Advanced Materials Inc., Sappi Limited, Sichuan Push Acetati Co.,Ltd, Solvay.
