## Abstracts

According to Statistics MRC, the Global Cloud Professional Services Market is accounted for \$14.20 billion in 2020 and is expected to reach \$58.27 billion by 2028 growing at a CAGR of 19.3% during the forecast period. Increasing offerings from cloud providers and the growing need for digitalization are the major factors propelling the market growth. However, regulatory compliance issues are hampering market growth.

Cloud professional services provide targeted guidance and technical expertise to help organizations manage their cloud-based infrastructure flexibly and cost-effectively. These services are delivered through various tools, practices, and frameworks, which assist enterprises in simplifying and focusing on their everyday business activities and improving productivity.

Based on the deployment model, the private cloud segment is estimated to have lucrative growth during the forecast period. The private cloud deployment model enables a company to have better control over its data and reduce risks, such as data loss and issues related to regulatory compliance. The private cloud is used in banking and financial institutions, large enterprises, and government organizations, where only authorized users can access the system.

By geography, the Asia Pacific is going to have a huge demand during the forecast period. Countries such as China, Japan, and India are leading this technology adoption, which includes embracing new-age technologies such as IoT, AI, edge, and cloud. The growing adoption of cloud technologies acts as a major factor pouring the adoption of cloud professional services among enterprises in this region.
