Abstracts

According to Statistics MRC, the Global Companion Robot Ethics Market is accounted for \$83.30 million in 2025 and is expected to reach \$281.50 million by 2032 growing at a CAGR of 19.0% during the forecast period. Companion robot ethics examines the ethical, social, and psychological ramifications of building machines that are intended to be human companions, caregivers, or emotional support systems. Relationship authenticity is called into question by these robots because people might become attached to things that mimic empathy but aren't actually sentient. Other ethical issues include dependency, where relying on robots may weaken human-to-human relationships, and privacy, since companion robots frequently gather private information. Dignity and autonomy must also be taken into account by designers, particularly in situations like eldercare, where robots should complement human agency rather than take its place. Companion robot ethics ultimately aims to strike a balance between respectful technological advancement and human values, trust, and well-being.

According to a 2020 BMC Geriatrics survey, after live interactions with companion robot pets, 60% (40/67) of younger adult participants reported no ethical concerns**, while 30% (20/67) did express concerns, most commonly about reduced human contact (10%) and deception (6%).

Market Dynamics:

Driver:

Awareness of mental health and loneliness

The need for companion robots that can offer emotional support is being driven by the growing recognition of loneliness and social isolation as major public health concerns. Therapy and mental distress can be lessened by robots that are built with natural conversational abilities, sympathetic reactions, and encouraging interactions. However, there are ethical questions about whether depending on robots for company could supplant deep human connections and increase loneliness. Additionally, since these robots mimic empathy without actually understanding, there is the issue of deceit. In spite of this, their application in helping people with anxiety, depression, or cognitive impairments demonstrates their expanding role

Restraint:

Data security & privacy issues

Emotional analysis, voice data collection, and continuous monitoring are frequently necessary for companion robots to operate efficiently. This increases personalization, but it also poses serious cybersecurity and privacy risks. Medical records, emotional states, and other sensitive personal data are among the things that can be compromised or misused by businesses or bad actors. Ethically, the use of data without transparency raises concerns about consent, particularly for older or cognitively impaired users who might not fully comprehend the data being collected. When users believe they are being watched, their trust is eroded, which may limit adoption. Privacy concerns will continue to be a significant obstacle in the absence of strong data protection measures and open procedures.

Opportunity:

Growing involvement in elderly and disability care

The ability of companion robots to assist the elderly and disabled is one of their biggest potential applications. As the population ages quickly and the need for caregivers grows, robots can help with everyday chores, remind people, keep an eye on health, and provide emotional support. This offers an ethical chance to improve quality of life,

autonomy, and dignity, especially for those who might feel alone. Professionals can concentrate on providing higher-level emotional and medical support by using robots to augment human caregivers rather than replace them. Furthermore, the primary growth opportunity in elder and disability care is the potential to create safer, more independent living conditions, but ensuring equitable access is a challenge.

Threat:

Possibility of emotional control

The potential for emotional manipulation is one of the biggest risks associated with companion robots. Users—especially vulnerable groups like children, the elderly, or those with mental health issues—may grow to have a great deal of faith in machines that are unable to feel the same emotions as them because they are made to mimic empathy and companionship. Businesses could take advantage of this reliance by incorporating features that persuade users to buy goods or services or adopt certain habits. This brings up moral questions regarding authenticity, consent, and taking advantage of emotional weakness. In the absence of robust protections, companion robots may turn into psychological manipulation tools that erode trust and autonomy.

Covid-19 Impact:

Due to the COVID-19 pandemic's emphasis on the potential advantages and moral dilemmas of robotic companionship, interest in the companion robot ethics market has increased dramatically. Because of lockdowns, social distancing, and overburdened healthcare systems, loneliness among the elderly and vulnerable increased, leading to a spike in demand for robots that could monitor health, offer emotional support, and assist without direct human interaction. As robots were increasingly seen in hospitals and assisted living facilities, ethical discussions about privacy, reliance, and the replacement of human caregivers also became more heated. Consequently, the pandemic served as a driving force behind adoption, highlighting the pressing need for moral frameworks to direct responsible implementation.

The humanoid robots segment is expected to be the largest during the forecast period

The humanoid robots segment is expected to account for the largest market share during the forecast period because of their human-like looks, gestures, and communication patterns, which foster familiarity and trust, humanoid robots are particularly well-suited for interactive, companion, and caregiving roles. Their capacity to

imitate social cues and offer tailored support makes them highly appealing in fields that value natural interaction, such as healthcare, education, and eldercare. Emotional authenticity, dependence, and the possibility that users could confuse fake empathy for real connection are ethical issues brought up by this dominance. Therefore, the most profitable and morally challenging market segment is represented by humanoid robots.

The child education segment is expected to have the highest CAGR during the forecast period

Over the forecast period, the child education segment is predicted to witness the highest growth rate. The increasing use of companion robots in therapy, education, and at-home learning—where they serve as interactive tutors, social partners, and developmental aids—is what is driving this growth. Because they provide individualized, interesting interaction, they are especially helpful in assisting kids with social difficulties, autism, or learning disabilities. These robots can adjust to the needs of kids owing to developments in artificial intelligence and natural language processing, which makes them useful resources for cognitive and emotional growth. However, ethical precautions are essential to avoid over-reliance, guarantee openness regarding robotic limitations, and emphasize that these technologies are meant to support human educators or caregivers rather than to replace them.

Region with largest share:

During the forecast period, the Asia Pacific region is expected to hold the largest market share, mostly due to China, South Korea, and Japan's strong leadership in robotics innovation, cultural acceptance of human-robot interaction, and government backing for the integration of robots into homes, workplaces, and healthcare settings. Japan, in particular, has tackled its rapidly aging population and caregiver shortage by being a pioneer in the development of humanoid and therapeutic robots for elderly care. China and South Korea are also making significant investments in social and service robots, backed by strong AI ecosystems. Although this regional dominance raises ethical concerns about privacy, emotional authenticity, and equitable access to cutting-edge robotic companionship, it also reflects technological capability and societal readiness.

Region with highest CAGR:

Over the forecast period, the North America region is anticipated to exhibit the highest CAGR, driven by robust investments in healthcare robotics, quick developments in AI, and growing demand for socially assistive technology. Companion robots are

increasingly being used in education, mental health support, and eldercare, especially in the United States, where tech giants and startups are spearheading innovation. Adoption is accelerating due to heightened awareness of loneliness, particularly in the wake of COVID-19, and caregiver shortages. Furthermore, North America is a high-growth and ethically driven market hub because of the regions more stringent ethical and regulatory frameworks surrounding AI and data privacy, which encourage businesses to innovate responsibly.

Key players in the market

Some of the key players in Companion Robot Ethics Market include Microsoft, IBM, Embodied, Inc, SAP, Furhat Robotics, Hanson Robotics, Intel, SoftBank Robotics, Google AI, Intuition Robotics, Salesforce, DataRobot Inc, Blue Frog Robotics Inc, Panasonic Holdings Corporation and Digital Dream Labs, LLC.

Key Developments:

In August 2025, SAP and SmartRecruiters announced that SAP has entered into an agreement to acquire SmartRecruiters, a leading talent acquisition (TA) software provider. SmartRecruiters' deep expertise in high-volume recruiting, recruitment automation and AI-enabled candidate experience and engagement are considered an ideal addition to the SAP SuccessFactors human capital management (HCM) suite.

In August 2025, Salesforce, Inc. signed a definitive agreement to acquire Regrello, an AI-native platform that transforms business data into agile, agentic workflows. This acquisition is expected to close in the company's third fiscal quarter of 2026. The deal, which will be funded with cash on hand, will not affect CRM's capital return program or fiscal 2026 guidance.

In July 2025, SoftBank Robotics Australia and SoftBank Robotics Singapore have launched icetana AI Limited's AI security solution as ICETANA AI SmartBX Security in the APAC region. Under an agreement recently signed by SoftBank Robotics Group, SoftBank Robotics Australia and SoftBank Robotics Singapore will be distributing the solution in Australia, New Zealand, Singapore, Hong Kong, Indonesia, Malaysia, Philippines, South Korea, Thailand, Taiwan and Vietnam.

Robot Types Covered:

Humanoid Robots

Animal-like Robots

Virtual Companions

Assistive Robots

Therapeutic Robots

Interaction Modes Covered:

Physical Robots

Virtual Agents

Hybrid Systems

Ethical Risk Levels Covered:

Low Risk

Moderate Risk

High Risk

Emotional Engagement Levels Covered:

Transactional

Relational

Immersive

Applications Covered:

Elderly Care

Healthcare

Domestic Use

Mental Health Support

Child Education

Rehabilitation

End Users Covered:

Households

Healthcare Facilities

Educational Institutions

Rehabilitation Centers

Regions Covered:

North America

US

Canada

Mexico

Europe

Germany

UK

Italy

France

Spain

Rest of Europe

Asia Pacific

Japan

China

India

Australia

New Zealand

South Korea

Rest of Asia Pacific

South America

Argentina

Brazil

Chile

Rest of South America

Middle East & Africa

Saudi Arabia

UAE

Qatar

South Africa

Rest of Middle East & Africa

What our report offers:

- Market share assessments for the regional and country-level segments
- Strategic recommendations for the new entrants
- Covers Market data for the years 2024, 2025, 2026, 2028, and 2032
- Market Trends (Drivers, Constraints, Opportunities, Threats, Challenges, Investment Opportunities, and recommendations)
- Strategic recommendations in key business segments based on the market estimations
- Competitive landscaping mapping the key common trends
- Company profiling with detailed strategies, financials, and recent developments
- Supply chain trends mapping the latest technological advancements

Free Customization Offerings:

All the customers of this report will be entitled to receive one of the following free customization options:

Company Profiling

Comprehensive profiling of additional market players (up to 3)

SWOT Analysis of key players (up to 3)

Regional Segmentation

Market estimations, Forecasts and CAGR of any prominent country as per the client's interest (Note: Depends on feasibility check)

Competitive Benchmarking

Benchmarking of key players based on product portfolio, geographical presence, and strategic alliances

Contents

1 EXECUTIVE SUMMARY

2 PREFACE

- 2.1 Abstract
- 2.2 Stake Holders
- 2.3 Research Scope
- 2.4 Research Methodology
 - 2.4.1 Data Mining
 - 2.4.2 Data Analysis
 - 2.4.3 Data Validation
 - 2.4.4 Research Approach
- 2.5 Research Sources
 - 2.5.1 Primary Research Sources
 - 2.5.2 Secondary Research Sources
 - 2.5.3 Assumptions

3 MARKET TREND ANALYSIS

- 3.1 Introduction
- 3.2 Drivers
- 3.3 Restraints
- 3.4 Opportunities
- 3.5 Threats
- 3.6 Application Analysis
- 3.7 End User Analysis
- 3.8 Emerging Markets
- 3.9 Impact of Covid-19

4 PORTERS FIVE FORCE ANALYSIS

- 4.1 Bargaining power of suppliers
- 4.2 Bargaining power of buyers
- 4.3 Threat of substitutes
- 4.4 Threat of new entrants
- 4.5 Competitive rivalry

5 GLOBAL COMPANION ROBOT ETHICS MARKET, BY ROBOT TYPE

- 5.1 Introduction
- 5.2 Humanoid Robots
- 5.3 Animal-like Robots
- 5.4 Virtual Companions
- 5.5 Assistive Robots
- 5.6 Therapeutic Robots

6 GLOBAL COMPANION ROBOT ETHICS MARKET, BY INTERACTION MODE

- 6.1 Introduction
- 6.2 Physical Robots
- 6.3 Virtual Agents
- 6.4 Hybrid Systems

7 GLOBAL COMPANION ROBOT ETHICS MARKET, BY ETHICAL RISK LEVEL

- 7.1 Introduction
- 7.2 Low Risk
- 7.3 Moderate Risk
- 7.4 High Risk

8 GLOBAL COMPANION ROBOT ETHICS MARKET, BY EMOTIONAL ENGAGEMENT LEVEL

- 8.1 Introduction
- 8.2 Transactional
- 8.3 Relational
- 8.4 Immersive

9 GLOBAL COMPANION ROBOT ETHICS MARKET, BY APPLICATION

- 9.1 Introduction
- 9.2 Elderly Care
- 9.3 Healthcare
- 9.4 Domestic Use
- 9.5 Mental Health Support
- 9.6 Child Education

9.7 Rehabilitation

10 GLOBAL COMPANION ROBOT ETHICS MARKET, BY END USER

10.1 Introduction

10.2 Households

10.3 Healthcare Facilities

10.4 Educational Institutions

10.5 Rehabilitation Centers

11 GLOBAL COMPANION ROBOT ETHICS MARKET, BY GEOGRAPHY

11.1 Introduction

11.2 North America

11.2.1 US

11.2.2 Canada

11.2.3 Mexico

11.3 Europe

11.3.1 Germany
