Abstracts

According to Statistics MRC, the Global Composite Rollers Market is accounted for \$133.60 million in 2020 and is expected to reach \$233.01 million by 2028 growing at a CAGR of 7.2% during the forecast period. Growing demand for lightweight rollers and rising demand from mining and pulp & paper industries are driving the market growth. However, higher costs and lack of awareness about the benefits of rollers is hampering the growth of the market.

Composite rollers are lightweight alternatives of metal-based rollers which offer up to 60% weight saving over metal rollers. They provide lower maintenance requirement, longer operational life, reduced power requirements, lower noise emission, improved productivity, and reduce downtime.

Based on the end user, the pulp & paper segment is going to have lucrative growth during the forecast period owing to the increasing usage of composite rollers as printing roller, guide rollers, and other applications in paper and pulp industries. By geography, North America is going to have high growth during the forecast period due to enchanting demand for corrosive resistant rollers in the region to gain operational as well as safety benefits due to which the market for composite rollers is blooming from end use industries.
