According to Statistics MRC, the Global Construction Robots Market is accounted for \$98.99 million in 2020 and is expected to reach \$395.42 million by 2028 growing at a CAGR of 18.9% during the forecast period. Some of the key factors propelling the market growth include growing urbanization worldwide, stringent government regulations for worker's safety, high demand for offices, manufacturing facilities, recreation spaces, and hotels, increased demand for higher use of construction equipment, and enhanced productivity, quality, and safety due to the implementation of construction robots. However, high equipment and setup costs may restrain the market growth.

Construction robots are professional service robots currently used in the construction. Construction robots prove their worth by providing major operational cost-savings through increased uptime and decreased labour costs. It refers to construction operations that are automatically carried out by using automated construction equipment or construction robots. It is used in applications such as building and demolishing of residential, commercial, and industrial infrastructures. This robotics has reduced or completely removed human intervention from construction activities. Construction robots are used in activities such as demolition of structures as well as 3D printing of walls & structures. In addition, construction robots can be used for material handling activities such as placing bricks to build wall and transportation of building material vertically or horizontally on construction site.

By application, the nuclear dismantling and demolition segment is anticipated to grow at the significant rate during the forecast period. The high growing needs for eliminating the presence of human operators in hazardous areas and shielding them from the radiation in nuclear-decommissioning attribute to the high growth of the market for

nuclear dismantling and demolition. Also, the construction robots players have incorporated many features in the demolition robots, which provide easy access, promote safety, and increase efficiency in confined-spaces, making it advantageous over the handheld breakers or other substitutes used for demolition purposes.

On the basis of geography, the market in Asia Pacific is expected to grow at the significant rate during the forecast period, due to the adoption of automation in mining and construction industries in countries like Australia, China, India, Malaysia, and Vietnam. APAC has abundant natural reserves distributed among various countries. With growing urbanization and wide availability of natural resources throughout the region, the mining and construction companies have started using automated equipment, operating software, and communications system to connect and operate on-site. Also, the presence of a large number of robotic manufacturing companies in China and Japan and a high growth rate of the market for 3D printers for advanced construction, are driving the growth of the construction robot market in APAC.

Some of the key players in Construction Robots Market include Construction Robotics LLC, Advanced Construction Robotics, Inc., COBOD International AS, Brokk AB, Ekso Bionics, Conjet AB, Komatsu Ltd., Husqvarna AB, Cyberdyne, Inc., Alpine Sales & Rental Corp., Fujita Corporation, Autonomous Solutions, Inc.
