## **Abstracts**

According to Statistics MRC, the Global Defoliant Market is accounted for \$17.00 billion in 2020 and is expected to reach \$30.77 billion by 2028 growing at a CAGR of 7.7% during the forecast period. Rise in venture funding for the development of agricultural products and increasing availability of fertilizers, pesticides, herbicides, and other chemicals are the major factors propelling the market growth. However, rising environmental concerns is hampering the market growth.

Defoliant is an herbicidal chemical that is sprayed on the plants that causes leaves to fall off. In crop harvesting, the defoliants are dusted over the crops such as cotton crops in order to facilitate harvesting. Defoliant chemicals are widely used in managing the crop lands and lawns and landscape turf management.

Based on the application, the fruit tree segment is estimated to have a lucrative growth during the forecast period. Defoliation of leaves and fruit from the infected trees may be useful to surpass the spread of the disease. By geography, the Asia Pacific is going to have a huge demand during the forecast period due to the increasing agricultural production and ever-rising population.

Some of the key players profiled in the Defoliant Market include BASF SE, ADAMA, AMVAC Chemical Corporation, Bayer Crop Science, China National Chemical Corporation, Corteva, Dormiente, Dow Chemical Company, Drexel Chemical Company, Dupont Company, EuroChem Group, FMC Corporation, Nissan Chemical Corporation, Novozymes, Nufarm Limited, ROTAM, Syngenta, and Valent Biosciences Corporation.
