According to Statistics MRC, the Global Degaussing System Market is accounted for \$1,184.79 million in 2020 and is expected to reach \$1,877.00 million by 2028 growing at a CAGR of 5.9% during the forecast period. Growing demand for naval warfare and technological advancements in degaussing equipment are driving the market growth. However, unavailability of skilled professionals is hampering the growth of the market.

Degaussing system is used to reduce or eliminate unwanted magnetic field of anything such as the ships and these systems provide precise current control, overheating protection and LED status indicators which enable users to experience enhanced efficiency and safety.

Based on the solution, the degaussing segment is going to have lucrative growth during the forecast period as degaussing solutions offer various advantages such as enhanced signature control, assist in fault management, and magnetic maps. In naval warfare to protect ships from enemy mines, the degaussing solution systems are adopted, due to this reason the degaussing solution segment will have favorable growth in the during the time period.

By geography, North America is going to have high growth during the forecast period due to the rise in defense budgets and the need to safeguard vessels from the enemy are the drivers for the degaussing system market in the region.
