Factors such as the rapidly growing geriatric population, increasing demand for diagnostic imaging devices, growing government investment and funding's for research in modernization of imaging services, the subsequent increase in the prevalence of associated diseases, growing awareness about early disease detection, the widening scope of clinical applications are driving the market growth. However, high cost of diagnostic imaging systems may hamper the market growth.

Diagnostic imaging is a process of imaging human body with the help of various imaging services. These services include several technologies, techniques, and equipments to monitor, diagnose, screen, and treat medical conditions for effective medical intervention. Diagnostic imaging has improved the ability of doctors to treat, diagnose, and detect an injury or disease precisely at an initial stage. In addition, diagnostic imaging services are used to provide information associated with a specific area of the body to be treated or studied. Various advancements in imaging techniques in the field of modern medicine have facilitated the acquisition of information related to the human body for clinical interventions.

Based on the imaging modality, X-ray imaging segment is going to have lucrative growth during the forecast period, due to the rising geriatric population, lower cost of X-rays as compared to other imaging modalities, favourable returns on investments, and technological advancements in X-ray imaging systems. Furthermore, The X-ray imaging represented the biggest portion of the market. The key variables driving the development of this market incorporate the rising geriatric populace, lower cost of X-ray

Imaging when contrasted with other imaging modalities, ideal profits for ventures, and innovative progressions in X-ray imaging frameworks.

By geography, North America region is going to have lucrative growth during the forecast period, due to increasing geriatric population, high incidence/prevalence of various diseases, the large number of diagnostic imaging centres/procedures, increasing awareness about the benefits of early diagnosis of diseases, and the rapid adoption of technologically advanced imaging systems in this region. The U.S. holds the largest share in the market due to its high disposable income of the consumers. Additionally, the United States is projected to experience an enhanced rate of population aging, which indicates to an increase in demand for medical image services since the elderly population is more likely to suffer from chronic diseases.
