Abstracts

According to Statistics MRC, the Global Direct-Fed Microbials Market is accounted for \$1017.67 million in 2017 and is expected to reach \$2192.09 million by 2026 growing at a CAGR of 8.9% during the forecast period. Rising awareness about animal health, increasing in global meat and milk consumption, growing demand for quality animal products and enhancing demand for animal protein are some of the factors propelling the market growth. However, varying regulations pertaining to consumption of bacteria in food and feed are restraining the market.

Direct Fed Microbial (DFM) includes the feeding of beneficial microbes to dairy cattle when they are under periods of stress (disease, ration changes, environmental, or production challenges). Probiotics is another term for this group of feed additives. Probiotics or DFM have been shown to improve animal performance in controlled studies.

Based on livestock, poultry segment holds the major growth during the forecast period owing to rising demand for poultry meat across the world and direct-fed microbials provide poultry birds with protein, improving digestive enzyme activity, maintaining normal intestinal microflora, and reducing bacterial enzyme activity and ammonia production.

On the basis of geography, Asia Pacific holds the significant market share during forecast period owing to the focus on research and development in this sector, increasing awareness for animal health, rising demand for animal protein in developing countries such as India & China, and mounting inclination towards alternatives of antibiotics.

Some of the key players profiled in the Direct-Fed Microbials Market include Novus International, Inc., Novozymes, Archer Daniels Midland Company, Kemin Industries, Inc., Dupont, Chr.
