According to Statistics MRC, the Global Drilling Waste Management market is estimated at \$3.89 billion in 2016 and is expected to reach \$6.23 billion by 2023 growing at a CAGR of 6.9% from 2016 to 2023. Factors such as growing environmental concerns, increasing oil exploration and production activities, stringent government regulations and rising awareness regarding hazardous effects are influencing the market growth. In addition, future improvements in shale gas exploration along with ongoing R&D in offshore drilling are projected to provide huge opportunities for industry participants over the forecast period. However, intense competition in the service market and slump in crude oil prices are some of the key factors inhibiting the market growth.

Amongst Application, onshore segment held the major share and is anticipated to grow at a stable rate during the forecast period. Onshore finds its major market in the North American and European region.
