Abstracts

According to Statistics MRC, the Global Dry Milling market is accounted for \$65.73 billion in 2017 and is expected to reach \$125.46 billion by 2026 growing at a CAGR of 7.4%. Significant factors which are influencing the market growth are increasing demand for corn ethanol and corn is used as one of the main ingredients in feed. However, high maintenance costs are hindering the market growth.

The dry-milling process can be used as a dry grind process for either ethanol extraction from starch or fractioning of grits, meal, flour, and other co-products. The milling process separates the grain into four distinct physical components: the germ, flour, fine grits, and coarse grits. The separated materials are then reduced into food products utilized for human and animal consumption.

Based on application, the fuel segment is anticipated to have a significant growth during the forecast period due to increasing the demand for biofuel and animal feed products in developed markets. In terms of geography, Asia Pacific is estimated to be the fastest growing market owing to growing consumer awareness for renewable biofuel and increasing environmental concerns are fueling the market growth in this region.

Some of the key players in the Dry Milling market include Cargill, Green Plains Inc., Semo Milling, LLC, Flint Hills Resources, LP, Pacific Ethanol Inc., Sunopta, Inc., Lifeline Foods, LLC, Bunge Limited, Didion Milling Inc., Valero Energy Corporation, Archer Daniels Midland Company, Dacsa Group, Wikins Rogers Inc, Agricor Inc, Poet Llc, Homeland Energy Solutions Llc and House-Autry Mills Inc.
