Abstracts

According to Statistics MRC, the Global Electrochromic Glass and Devices Market is accounted for \$1.52 billion in 2017 and is expected to reach \$4.98 billion by 2026 growing at a CAGR of 14.1% from 2017 to 2026. Rising concern for efficient energy systems, increasing per capita income and rising levels of global warming are some of the key factors fueling the market growth. However, factors such as lack of awareness and volatile environment for investment are restraining the market growth.

Electrochromic glass is a kind of glass which changes its light transmission properties according to the electrical stimulus provided. With its unique properties such as durability and fast switching times, the electrochromic smart glass is expected to revolutionize the architecture application. Electrochromic devices (ECD) are systems of substantial commercial interest owing to their controllable transmission, absorption and/or reflectance. ECD is five-layer structure naturally composed of glass substrate, transparent conductor, electrochromic coating, ion conductor and ion storage coating. These devices are gaining importance due to their potential application in architecture for energy-efficient modern buildings; where it is possible to control the flow of light and heat passing through the building glazing.

Amongst Application, residential segment accounted for significant market share during the forecast period due to electrochromic glass owing to increasing usage of this glass in residential buildings as it blocks or allows the light or heat in the form of windows, doors and so on. By geography, Europe dominated the global market in terms of market revenue followed by Middle East & Africa. Asia Pacific is projected to expand at a substantial growth and will contribute to the global market value.
