Abstracts

According to Statistics MRC, the Global Electromagnetic Flowmeter Market is growing at a CAGR of 6.5% during the forecast period. Growing Population and Rising need for consistent measurement and monitoring of industrial fluids are the key factors influence market growth. Moreover, advances in flowmeter technology will provide ample opportunities for market growth. However, the inability to measure non-conductive fluids is limiting the market growth.

Electromagnetic flowmeters are devices employed to measure the flow of conductive fluids inside a pipe. Electromagnetic flow meters, by contrast, work best with grimy fluids. They are easy to install, cost-effective and low maintenance. Electromagnetic flowmeters work on Faraday's law of Induction, thus, they consume electrodes to measure process flow.

By Application, Water and Wastewater segment is going to have a lucrative growth during the forecast period owing to the growing investments in water infrastructure. Electromagnetic flow meters are used to measure treated and untreated sewage, processed water, water, and chemicals. By geography, Asia Pacific is estimated to have a lucrative growth due to the growth in this region is attributed to the surge in industrial growth and higher requirement of wastewater management.

Some of the key players profiled in the Electromagnetic Flowmeter Market are Invensys plc, Endress+Hauser AG, Hitachi Ltd, Flow Technology, Yokogawa Electric Corp, ABB Ltd., Omega,
