## Abstracts

According to Statistics MRC, the Global Enteral Feeding Formulas Market is accounted for \$4.29 billion in 2017 and is expected to reach \$9.83 billion by 2026 growing at a CAGR of 9.7% during the forecast period. Some of the key factors influencing the market growth include rising prevalence of chronic diseases and disorders, growing geriatric population, growing number of preterm births and rising demand for homecare. However, complications associated with enteral feeding are hindering the market growth.

Enteral feeding is a method to deliver nutrients into the gastrointestinal tract through the use of a tube. It is considered when an individual is not safe for oral intake or oral intake is not adequate to meet nutritional requirements. Enteral feeding tubes are available in various types based on the feeding route such as nasal tube, oral tube and esophagostomy tube.

Amongst Product, the standard formulas segment has considerable growth during the forecast period. The growth of this segment can be attributed to their extensive use in a majority of enterally fed patients, especially chronically tube-fed patients.

By Geography, Asia-Pacific region is expected to offer significant growth opportunities for market players during the forecast period due to the presence of a large patient pool for chronic diseases and disorders, increasing incidences of preterm births, rising healthcare expenditure, rapidly developing healthcare infrastructure, increasing middle-class population and rising population in emerging APAC countries.

Some of the key players in global enteral feeding formulas market are Abbott Laboratories, Novartis AG, Global Health Product Inc., Nestle S.A., Trovita Health
