Abstracts

According to Statistics MRC, the Global Extruded Plastics Market is accounted for \$194.15 billion in 2017 and is expected to reach \$325.23 million by 2026 growing at a CAGR of 5.9% during the forecast period. Growth in end-use industries, increase in usage of plastics in agriculture are some of the factors fuelling the market growth. However, the production, use and disposal of extruded plastics, particularly PVC, Increasing government regulations and norms regarding use and disposal of plastics, in interest of protecting environment are restricting the market growth.

Plastics are the most widely used materials in the world. Rapid development in the plastic industry have made plastics capable of withstanding high pressure, and temperature situations, which makes it a material of choice for a variety of industrial applications. Extrusion is a technology used for converting plastic materials to manufacture pipes, films, tubes, sheets, and various other products for industrial applications. In this process, a material is designed by forcibly pushing it through a tool that eventually shapes it. Plastics of all types such as, high-density polyethylene, low-density polyethylene, polypropylene, and polystyrene are appropriate for extrusion as they are easily malleable. Low-density polyethylene exhibits exceptional uniformity and consistency in its dimensions.

Based on type, low density polyethylene (LDPE) is a polyolefin material which has high molecular weight. It is a non-toxic material with high degree of break resistance. It is resistant to a large number of laboratories chemical and is easy to fabricate. These properties together make LDPE a material of choice for packaging manufacturers. By Geography, Asia-Pacific region dominated the global extruded plastics market. The product market is likely to show significant growth in Asia-Pacific, particularly in India, China and Japan, owing to the fast-paced industrialization, elevating infrastructural standards and e-commerce boom in this region. The global demand for packaging from e-commerce segment for goods handling, when in transit, has accelerated the extruded

plastics market growth.
