Abstracts

According to Statistics MRC, the Global Federated Learning Solutions Market is accounted for \$83.14 million in 2020 and is expected to reach \$227.36 million by 2028 growing at a CAGR of 13.4% during the forecast period. The ability to ensure better data privacy, security by training algorithms on decentralized devices and the growing need to increase learning between devices & organizations are driving the market growth. However, a lack of skilled technical expertise is hampering the growth of the market.

Federated Learning is a machine learning setting where the objective is to train a high-quality unified model with training data distributed over a large number of clients each with unreliable and relatively slow network connections. Federated learning (also known as collaborative learning) is a machine learning technique that trains an algorithm across multiple decentralized edge devices or servers holding local data samples, without switching them.

Based on the end-user, the manufacturing segment is going to have lucrative growth during the forecast period. Smart manufacturing technologies are extensively accepted by manufacturers to advance the proficiency and efficiency of the industrial process while guaranteeing a high level of safety. In today's competitive environment growing focus on IIoT with advances in artificial intelligence and machine learning manufacturers can access big data and use learning algorithms to analyze the data. But, the privacy of sensitive data for industries and manufacturing companies is a significant factor. Federated learning algorithms can be useful to these problems as they do not access or reveal any sensitive data.

By geography, Europe is going to have high growth during the forecast period. The

market growth is accredited to the growing acceptance of technologies and the existence of a large number of federal learning solution vendors in the region. Other factors like stringent data regulations and rising demand for data privacy are predictable to increase the market in Europe.

Some of the key players profiled in the Federated Learning Solutions Market include Cloudera, Consilient, DataFleets, Decentralized Machine Learning, Edge Delta, Enveil, Extreme Vision, Google, IBM, Intellegens, Lifebit, Microsoft, NVIDIA, Owkin and Secure AI Labs company.
