## Abstracts

According to Statistics MRC, the Global Feed Binders market is expected to grow from \$4.13 billion in 2015 to \$5.41 billion by 2022 with a CAGR of 3.9%. Raising awareness for livestock food and health is the major factor driving the market growth. Furthermore, growing demand for meat and adoption of organized farming is favoring the market growth during the forecast period. On the other hand, volatility of raw material cost for feed binders is restraining the market growth. Strict regulations are also anticipated to pose challenges to players in the market.

The clay segment is expected to witness high growth rate during the forecast period. It is due to low cost requirements and less inclusion level per ton of feed.

Lignosulphonates is anticipated to be the fastest-growing segment in near future. North America and Asia Pacific are expected to be fastest growing markets. Asia Pacific is expected to witness fastest growth on account of raising meat consumption and availability of resources.
