## Abstracts

According to Statistics MRC, the Global Flexi Tank is accounted for \$307.54 million in 2017 and is expected to reach \$1,709.91 million by 2026 growing at a CAGR of 21.0% during the forecast period. Growth in the global trade of food-grade liquids, non-hazardous chemicals, and pharmaceutical liquids is the major driver for the flexi tanks market. However, the absence of repositioning costs, low labour and load costs are some of the factors hindering the market growth.

Flexi tanks are bags used to transport large quantities of liquids up to 24,000 litres, in a 20%li%feet container. They are manufactured in standard sizes, ranging from 10,000 litres to 24,000 litres. They are bags of polymer materials such as polyethylene, polypropylene, PVC coated fabric, etc. usually employed for transportation of non-hazardous liquids such as wine, fruit juices, edible oils, industrial liquids, sweeteners, agricultural liquids, etc. All the liquids that do not fall under the category of dangerous goods as per IMDG code can be transported using flexi tanks. Currently, flexi tanks are employed for transport of edible liquids such as wine, fruit juices, edible oils, sweeteners, etc.

Based on product, multi trip flexitanks have gained a significant portion of the flexitanks market share in the past few years and the trend is likely to continue during the forecast period. Multilayer flexitanks are made up of several layers of polyethylene, covered with an outer protective layer of polypropylene. By geography, Asia Pacific region is expected to represent the fastest growing local market, accounting for 61% of the total share volume in 2015. The region is expected to reach 67.4% of the overall market during the forecast year.
