According to Statistics MRC, the Global Flow Cytometry Market is expected to grow from \$1.5 billion in 2016 to reach \$2.90 billion by 2022 with a CAGR of 11.6%. Raising demand for usage of flow cytometry in clinical trials, new technological improvements in flow cytometers, advancements in intuitive softwares are some factors fostering the market growth. However, lack of availability of technical expertise, huge investments in flow cytometry instruments are hindering the growth of the market.

Based on the Technology segment, Cell-based flow cytometry leads the market globally as they are widely used in the study of tumor stem cells and in the study of disease mechanism. Among applications, the demand for clinical diagnosis is increasing owing to growing demand for disease diagnostic tools. North America is dominating the flow cytometry market globally due to the support of government involved in developing new technologies for molecular diagnostics and also due to the presence of skilled professionals in the region.
