According to Statistics MRC, the Global Food Automation Market is accounted for \$10.73 billion in 2020 and is expected to reach \$21.23 billion by 2028 growing at a CAGR of 8.9% during the forecast period. The growing per capita food consumption and growth of the global food & beverage industry are driving the market growth. However, a stringent international food safety regulation is hampering the growth of the market.

Food automation delivers constantly improved quality, advances picking and handling times, and raises output by speeding up the packaging processes of the food product in food processing. The application of food automation in the food industry is all because of the growing demand for profitability, quality, and production of foods. To control and monitor the production and delivery of several goods and services automation is the formation of technology and its application. It performs tasks that were earlier complete by humans. Food automation is used in the food and beverage industry to formulate, processed, and packaged food products by a mechanical process.

Based on the mode of operation, the fully-automatic segment is going to have lucrative growth during the forecast period, due to factors such as, the increasing adoption of fully automated solutions for processing activities, such as picking & placing, palletizing & depalletizing packaging & repackaging, and grading & sorting. With the accessibility of industrial robot and robotics systems, as an alternative of human labors various food & beverages sector have automated there processing & packaging units. The tendency of substituting human labor with automatic systems is predictable to motivate the fully automatic operational mode.

By geography, Asia Pacific is going to have high growth during the forecast period, owing to the existence of big food & beverages manufacturing industries. The Asian countries, with China and Japan, have the foremost robotics, sensors, and automation

hardware components that additionally lead the automation industry. Moreover, India, China, and Australia have a robust F&B manufacturing sector and export to other European and American countries, creating automation solutions. Furthermore, strict government regulations and standards associated with food safety & quality to stop consumer illness are the main reasons associated with the acceptance of food automation solutions.
