## Abstracts

According to Statistics MRC, the Global Food Preservatives Market is valued at \$2.38 billion in 2017 and is expected to reach \$3.67 billion by 2026 growing at a CAGR of 4.9%. Growing demand for processed foods, changing lifestyle and increasing disposable income are the major factors driving the market. However factors such as growing health concerns on the safety of food additives, increasing costs of natural preservatives and stringent government regulations are hindering the market growth.

Food preservatives are used to prevent the growth of microbes like yeast, molds and bacteria, extend the shelf life of food products, preserve the flavour, maintain nutritional value of the quality, texture, consistency, taste, color, alkalinity or acidity of food products and decrease food spoilage. They are broadly classified as natural and synthetic.

Based on Function, antimicrobials segment is expected to have significant share due to growing demand for packed frozen products with extended shelf-life which resulted in overall growth. By Application, beverages segment registered steady growth during the forecast period owing to the increasing usage of food preservatives in alcoholic beverages like wine and beer. Asia Pacific is anticipated to be the fastest growing region during the forecast period due to increasing disposable income and changing food consumption pattern particularly in China and India.
