These are used to determine allergens, pathogens, GMO's, meat species, mycotoxins, and others using various technologies. The food testing kits are used to check the samples of a large number of solid and liquid food samples to comply with the standard quality controls.

Based on Technology, Immunoassay-Based segment the growth of the segment is constantly enhancing due to the several advantages such as cost-effectiveness, rapid test results, and ability to carry out screening of multiple targets such as pathogens, meat speciation, GMOs, allergens, pesticides, mycotoxins, and other residues. By geography, Asia Pacific is expected to grow at a faster rate due to increasing export activities, which need onsite testing and faster test results to meet the standards & regulations enforced by different countries and regions.
