According to Statistics MRC, the Global FRP Rebar Market is accounted for \$164.60 million in 2020 and is expected to reach \$503.52 million by 2028 growing at a CAGR of 15.00% during the forecast period. Increasing application of FRP rebar in construction field, increasing corrosion issues and increasing government spending on renovation of deficient structures are driving the market growth. However, low acceptance of FRP rebars is hampering the growth of the market.

FRP rebar is a lightweight spiral wrapped fiberglass rod. It is embraced of two elements; a fiber such as carbon, glass, aramid and a matrix resin. It is mostly used as non-corrosive alternative over steel for the developed concrete reinforcement applications.

Based on the fiber, the basalt FRP segment is going to have lucrative growth during the forecast period as its substantial properties including lightweight, magnetic transparency and has high penetration and resistance to hostile environment are the key factors positively influencing segment growth.

By geography, Asia Pacific is going to have high growth during the forecast period due to owing to increasing investments by private various manufacturers in the region and due to the increasing demand from construction and building and water treatment plants industries in the countries in this region it is anticipated to drive growth of the Asia Pacific market.
