Full body scanner is an instrument and its main purpose is to scan a body part for security and safety concerns by passing electromagnetic radiations in order to identify objects without physical contact.

Depending upon Technology, 3D Body Scanners analyses the data of real time object based on its appearance and shape. Its main Purpose is to create a 3D model that share several traits with cameras to collect the information. It works on sending the laser range finder to the distance of a surface by timing the round-trip time of a pulse of light. These scans have a common reference system that aligns the information about surfaces within its field of view. It is widely used by military and healthcare sectors for detecting purpose.

By Geography, North America is expected to be a bench topper by the surpassing other regions during the forecast period due to the desire of conditioning more security and increasing terror threats and attacks followed by Asia pacific region.
