Abstracts

The Global Automotive Parts Aluminium & Magnesium Die-Casting market accounted for around \$6.2 billion in 2014 and is expected to reach \$10.8 billion by 2022 growing at a Compound Annual Growth Rate (CAGR) of 7.2% during the forecast period 2014 to 2022.

Aluminum is becoming popular material gradually due to its ability to be easily recycled. Around 70% of aluminum consumed can be reused. North America is the leading market for automotive aluminum die casting worldwide. More than 90% of the aluminum die-casting produced in the United States is made from post-consumer recycled aluminum. Rising esteem for fuel-efficient vehicles and a need to reduce the vehicle weight significantly influenced the aluminium die casting parts in the UK automotive industry.

Though Aluminium is dominating the current market, it is expected that Magnesium will be gaining a significant market share during the forecast period by growing at the highest CAGR. Capability to form casting with EMI and RFI shielding, complete recyclability, more electrical conductivity are some of the factors propelling the growth of magnesium market. China produces more than 50% of the global magnesium metal. Being magnesium cheap in China collapsed the main supply base of the western world. The International Magnesium Association (IMA) provided a forum for substitution of magnesium manufacturing and trade supporting the market growth.

The key players in the Automotive Parts Aluminium & Magnesium Die-Casting market include Magic Precision Inc., Kinetic Die Casting Company, Texas Die Casting, Endurance Group, Sandhar technologies limited, Meridian Lightweight Technologies Inc, Sunbeam Auto Pvt.
