Abstracts

The Global Medical Automation Technologies Market is estimated to be \$48.4 billion in 2014 and is expected to reach \$95.2 billion growing at a CAGR of 8.82% from 2014 to 2022. The factors that are influencing the market growth include rising healthcare costs, investment by venture capitalists and the increase in use of point of care testing devices (glucose meters, digital blood pressure monitors, pregnancy test kits and HIV test kits). However the tax imposed by the U.S government on medical devices manufacturers and rigorous approval procedures to launch a product or services by companies is likely to hinder the market growth. The rising need of automation in various other medical fields represents the growth opportunities for this market.

Global Medical Automation Technologies Market is categorized into three broad segments: applications, end user and geography.
