## Abstracts

According to Statistics MRC, the Global Greenhouse Heaters Market is accounted for \$30.24 billion in 2020 and is expected to reach \$70.69 billion by 2028 growing at a CAGR of 11.2% during the forecast period. Growing food production, changes in priority of consumers and rising environmental concerns are driving the market growth. However, lack of awareness regarding the product is hampering the growth of the market.

Greenhouse heaters are devices that provide uniform temperature control without releasing material harmful to the plants. Greenhouse heaters are employed in greenhouses with a motto of getting optimum crop production or maximum profit.

Based on the end user, the small and middle greenhouse segment is going to have lucrative growth during the forecast period which can be attributed to the rise in the food production which has led to greater adoption of greenhouse setups. Low costs associated with small and medium greenhouses also boost the growth of the segment.

By geography, Asia Pacific is going to have high growth during the forecast period owing to the increase in adoption of greenhouse gases. Moreover, rise in the population in this region led to a demand for food production and thus boosts the growth of the market.
