## Abstracts

According to Statistics MRC, the Global Heat Transfer Fluids Market is accounted for \$2.88 billion in 2018 and is expected to reach \$7.54 billion by 2027 growing at a CAGR of 11.3% from 2018 to 2027. Some of the key factors influencing the market growth are growing demand in the chemical industry, rising concentrated solar power industry and increasing industrial expansion. However, stringent government regulations and fire and explosion hazards may restrain the market growth.

Heat transfer fluids are liquid or gas explicitly manufactured for the principle of transmitting heat from one system to another. Heat transfer fluid is used to avoid overheating of substances while the process of heat transfer is taking place. The performance of heat transfer fluids is critical in determining the effectiveness of an operation as ideal heat transfer fluid would result in low cost of operations.

By Type, the Mineral Oils segment is anticipated to grow during the forecast period due to rising demand in chemical processing, petrochemical, manufacturing processes, CSP generation and geothermal energy applications. Amongst geography, Asia Pacific is likely to have a huge demand due to the growing investments in the automotive industry and growing consumer purchasing power in this region.

Some of the key players of Radio Frequency Component Market include The Dow Chemical Company, ExxonMobil, Huntsman Corporation, Eastman Chemical Company, Chevron, LANXESS, Global Heat Transfer Ltd, Royal Dutch Shell PLC., Schultz Canada Chemicals, Ltd.
