Abstracts

According to Statistics MRC, the Global Hemodynamic Monitoring Systems Market is accounted for \$970.46 million in 2020 and is expected to reach \$1,850.17 million by 2028 growing at a CAGR of 8.4% during the forecast period. Factors such as rising prevalence of lifestyle diseases, increasing incidence of respiratory disorders, and growing number of surgeries are driving the growth of the market. However, risks associated with invasive hemodynamic monitoring are hampering the growth of the market.

The hemodynamic monitoring system is primarily used for clinical inspection of cardiovascular health, longevity and quality of life of patients undergoing and recovering from cardiac surgery. These parameters are measured using photometric, electrical, pressure transducing equipment and invasive and noninvasive devices. The hemodynamic monitoring system also involves a use of various intravascular catheters.

Based on the type, the noninvasive segment is anticipated to expand at a rapid pace during the forecast period owing to the reduction of staffing costs and rising incidence of respiratory disorders. By geography, Asia Pacific is going to have high growth during the forecast period which can be attributed to extensive government reimbursement coverage for critical cardiac procedures and improving healthcare infrastructure.

Some of the key players profiled in the Hemodynamic Monitoring Systems Market include Cnsystems Medizintechnik GmbH, Uscom, Pulsion Medical Systems Se, Osypka Medical GmbH, NI Medical, CareTaker Medical, LiDCO Group, ICU Medical, Edwards Lifesciences Corporation, Deltex Medical, and Cheetah Medical.
