Abstracts

According to Statistics MRC, the Hip and Knee Reconstruction market accounted for \$18.3 billion in 2015 and is expected to grow at a CAGR of 11.19% to reach \$38.46 billion by 2022. The factors such as increase in the occurrence of osteoporosis in aging population, increasing number of obesity cases and raising multiple advancements in hip and knee reconstructive products, are some of the factors driving the market. However, multiple numbers of alternative treatments and high cost of equipments are the factors limiting the market growth.

Knee reconstruction devices are expected to have the largest share in hip and knee reconstruction product segment during the forecast period owing to increasing awareness of knee management systems and new innovations in technologies. North America is anticipated to grow at the highest CAGR during the forecast period due to high expenditure capacity.
