Abstracts

According to Statistics MRC, the Global Hydrostatic Transmission Market is accounted for \$6.00 billion in 2020 and is expected to reach \$10.08 billion by 2028 growing at a CAGR of 6.7% during the forecast period. Factors such as growing automobile industry, increasing demand from various end user industries, and growing demand for energy and power are driving the growth of the market. However, high cost of hydrostatic transmission equipment is hampering the growth of the market.

Hydrostatic transmission is used in low-speed conditions for producing high torque. It uses hydraulic fluid media to transmit power from the power source to the drive mechanism. The drive converts rotating mechanical power of the input shaft of the pump to the output drive shaft of the motor without the use of gears.

Based on the end user, the agriculture segment is anticipated to expand at a rapid pace during the forecast period owing to the increasing mechanization in this sector which fuels the demand for modern tractors. By geography, North America is going to have high growth during the forecast period which can be attributed to the increasing construction activities and infrastructural developments in the major economies of the region.

Some of the key players profiled in the Hydrostatic Transmission Market include Robert Bosch GmbH, Eaton Corporation PLC, Dana Holding Corporation, Kawasaki Heavy Industries Ltd, Danfoss A/S, Parker Hannifin Corporation, Hydrosila JSC, Carraro SpA,

Poclain Hydraulics France SAS, Kanzaki Kokyukoki Mfg Co Ltd, HANSA-TMP Srl, Inoxt, Inc. (PMC Global), Linde Hydraulics GmbH & Co KG, Perea Maritima S.A., and Tuff Torq Corporation.
