## Abstracts

According to Statistics MRC, the Global Industrial Ethernet Switches Market is expected to grow at a CAGR of 12.4% during the forecast period. Reduction of business downtime, increasing preference for managed switches with the rising implementation of IIoT and growing demand for Ethernet IP to Process Field Bus (PROFIBUS) linking devices are some of the key driving factors for the market growth. However, high initial installment cost of switches and expansion in implementation of WLAN solutions are some of the factors hindering the market growth. Emergence of Power over Ethernet (PoE) switches will be a key trend for market growth.

Ethernet switch is a multiport network switch that links all computer networking devices together on a computer and it forwards the data only to its destination port where it is required. It is generally classified into two main groups modular and fixed configuration. Modular switches allows to add the expansion modules into the switches as needed, thereby delivering the excellent flexibility to address changing networks, while fixed configuration switches are switches with a fixed number of ports and are normally not expandable.

By End User, electric & power segment seized a major share of the global industrial ethernet market due to the large-scale acceptance of network management devices such as switches, routers, hubs, and power supply devices. As these devices guarantee effectual implementation, supervision and security of the system, their demand has knowledgeable increase over the forecasted period.

By geography, North America is anticipated to dominate the market due to the automation installations in industrial Ethernet functions on the control end, to utilize the system in the devices fixed on the grid and established infrastructure. The Asia Pacific

Industrial Ethernet market growth is mainly driven by continuous industrialization and need to automate the manufacturing process.
