## Abstracts

According to Statistics MRC, the Global Industrial Filtration Market is accounted for \$29.52 billion in 2020 and is expected to reach \$58.35 billion by 2028 growing at a CAGR of 8.9% during the forecast period. The need for a safe working environment in industrial facilities and government support policies for environmental protection are driving the market growth. However, the unfavorable economic condition may hamper the market growth.

Industrial filtration is a process of cleaning and treating different industrial oils, gases, lubricants, and water. The main purpose of industrial filtration is to protect machinery, human life, and the environment from hazardous substances. Industrial filters are designed for specific tasks, system properties, and operating conditions. Industrial filters are used in various industrial sectors such as in the paper industry, power plants, and the automotive industry.

Based on the type, the liquid filter segment is going to have lucrative growth during the forecast period due to the increasing demand for liquid filtration systems for zero-emission and zero discharge from manufacturing and other industries. Also, the adoption of advanced equipment in the water and wastewater treatment industry is likely to push the liquid filtrations systems.

By geography, North America is going to have high growth during the forecast period due to the emission regulations accompanied by the need for clean indoor air facilities and the growth in manufacturing, power generation, oil & gas, and food & beverage industries has a substantial influence on the economic development of the countries in the region.

Some of the key players profiled in the Industrial Filtration Market include Ahlstrom-Munksjö, Alfa Laval, Camfil, Cummins Inc, Donaldson Company, Eaton, Filtration Group Corporation, Freudenberg Group, Lenntech B.V., MANN+HUMMEL, Pall Corporation, Parker Hannifin Corp, and Sidco Filter Corporation.
