According to Statistics MRC, the Global Industrial Machine Vision Lens Market is accounted for \$6,650.57 million in 2020 and is expected to reach \$14,360.10 million by 2028 growing at a CAGR of 10.1% during the forecast period. Growing industrialization, rise in the need for quality inspection and automation and increasing use of machine learning are driving the market growth. However, lack of skilled professionals is hampering the growth of the market.

Industrial machine vision lenses are used to provide images through the lens in the output device for analysis and inspection in various industrial applications. Machine vision lenses are a combination of smart cameras and smart sensors. form of technology that would allow a computer system to examine, analyze and recognize objects or items which are in motion. Machine vision is different compared to computer vision.

Based on the deployment, the robotic cell segment is going to have lucrative growth during the forecast period due to the developments in AI and machine learning robotic cell reduces the work force required, which consequently results in reducing the cost of company. This factor is predicted to be driving the robot cell deployment segment.

By geography, Europe is going to have high growth during the forecast period due to the cost of production and the lower cost of capital machinery rendering it appropriate to audit, gauge and quantify the performance of the workforce in the region.
