Abstracts

According to Statistics MRC, the Global Industrial Valves Market is accounted for \$48.10 billion in 2020 and is expected to reach \$140.12 billion by 2028 growing at a CAGR of 14.3% during the forecast period. Increasing focus on the global development of smart cities, rising need for connected networks to monitor and maintain industrial equipment and rising demand for valves from healthcare and pharmaceuticals industries due to outbreak of Covid-19 pandemic are driving the market growth. However, lack of standardized norms and governing policies is hampering the growth of the market.

Industrial valves are mechanical devices which are used to alter the stream or flow of water or other liquids, gases and slurries. Industrial valves regulate the flow via pipes and other passages by opening, closing and partially opening the vaults. With the increasing investments in technology, these manually control mechanical devices can now be operated automatically.

Based on the function, the on-off/isolation valves segment is going to have lucrative growth during the forecast period. On-off/isolation valves are one of the most elementary and indispensable components of the present modern technological society. These are essential to virtually all manufacturing processes and every energy production and supply system. On-off/isolation valves fulfil stringent shut-off requirements across various industries; therefore, these valves account for a larger share of the overall industrial valves market.

By geography, Asia Pacific is going to have high growth during the forecast period due to the speedy population growth and urbanization in developing economies such as India, Japan and China which have led to the growth of the water & wastewater treatment, energy & power, pharmaceuticals, building & construction, chemicals, and oil & gas industries.

Some of the key players profiled in the Industrial Valves Market include Alfa Laval, AVK Holding AS, Broer Group, CIRCOR International Inc., Crane Co., Curtiss-Wright Corporation, Danfoss AS, Emerson Electric Co., Georg Fischer Ltd, Flowserve Corporation, General Electric (Baker Hughes), Hitachi Metals Ltd, Honeywell International Inc., IMI PLC and ITT Inc.
